

CE206 Human Computer Interaction and Information Visualisation

Assignment 2: A complete website optimised for mobile phones.

1804987

Task 1: 3

Task 2: 6

Task 3: 22

Task 4: 17

TOTAL: 48

Feedback: A site map would help to show how you intend to structure the information on your website. The sections of content are clearly defined. You should include a user persona for a visually impaired user to help to highlight the areas of design that are required for these types of users. You should include a prototype to demonstrate how the site will be laid out. You were required to include some design research and discussion of design in Task 2. A good graphical design showing the layout and design for the website. The design of the website should look professional and complete. Your design is sufficient to meet the criteria of the assignment. Website only partially works at 480 and 960 pixel widths. The website provides good solutions for operation on mobile devices. The liquid implementation of design is a good solution to handling different browser widths but you should also consider adaptive and responsive methods too. Excellent evaluations of your website. Good presentation of your results. Excellent prioritisation of your evaluation. Both skill trees were included so you can now consider what you have learned from the module and what you need to work on more. For questions and/or further feedback please contact the module supervisor within 7 days of receiving the marks.
